Gambhir Sharma

DevOps Engineer

hey@gambhir.dev | +39 351 474 6445 | Rome, IT | gambhir.dev | GitHub | LinkedIn

DevOps Engineer with hands-on experience building and deploying cloud-native applications on Kubernetes and AWS. Experienced in CI/CD automation, GitOps, infrastructure as code, observability, and DevSecOps using tools such as GitHub Actions, Helm, ArgoCD, Prometheus, Grafana, and Terraform. Strong software engineering background with TypeScript, Python, Go, and PostgreSQL, enabling automation and scalable infrastructure solutions. Also experienced with networking and 6G ISAC research.

Experience

CGI — Rome, Italy | Full-time
DevOps Space Engineer - Intern — September 2025 - March 2026
Worked across multiple spheres of DevOps, including CI/CD automation, cloud infrastructure management, and deployment optimization, with a strong DevSecOps focus on vulnerability analysis and remediation, and MLOps experience using Kubeflow and JupyterHub to support scalable ML and Earth observation data platforms. Built a full test suite for web UI components on isula.earth, covering validation, regression testing, and troubleshooting of front-end issues.

RepoCraft — Remote | Mumbai
Full Stack Developer — June 2023 - February 2024
Worked on the open-source RepoCraft project, contributing to both frontend and backend. Gained experience building production-grade web apps and exposure to DevOps.

Education

Università degli Studi di Roma Tor Vergata — Bachelor
ICT and Internet Engineering — Rome, Italy • September 2024 - Present
Final-year Engineering student specializing in 6G technologies, Integrated Sensing and Communication (ISAC), computer networking, distributed systems, and edge computing. Final-year thesis focused on 6G ISAC systems and distributed edge networking.

CyberChallenge.IT — Training Program
Cybersecurity — Rome, Italy • February 2025 - July 2025
Learned a lot from a security point of view through this CTF program. Explored cryptography, web vulnerabilities, social engineering, and system-level exploit development. It really broadened my understanding of secure software design.

Projects

Lynq NTN-Pulse (Winner, NEOSPACE Europe 2026) — October 2026
Designed a 112-satellite global 5G IoT constellation (<100 ms p99 latency) and built its Kubernetes/KubeEdge cloud-to-edge orchestration, with canary OTA updates for satellites, gateways and devices.
Tech: Kubernetes, KubeEdge, Slurm/HPC (MeluXina), Streamlit

ISAC-K8s
Developed a distributed 6G ISAC (Integrated Sensing and Communication) platform using KubeEdge, with federated learning for decentralized model training on edge nodes.
Tech: K8s, Go, 6G, gRPC, KubeEdge

On Fly Image Optimization
Self-hosted image optimizer deployed on Kubernetes. Built with Next.js and Supabase Edge Functions, with observability via Prometheus & Grafana. Deployed using ArgoCD and Helm, with CI/CD pipelines automated via GitHub Actions and Kustomize.
Tech: TypeScript, Next.js, Supabase, S3, GitHub Actions, PostgreSQL, K8s, Helm, ArgoCD

Lambda Web Scraping
Serverless scraper using AWS Lambda, storing logs in DynamoDB and sending real-time alerts via Telegram API. Fully deployed on AWS.
Tech: AWS, EC2, DynamoDB, Python

Open Source Contribution

Freelens
#1431 Freelens k8s custom theme

CGI
LINO CLI binary installation for macOS

Arch Linux
Arch Linux package maintainer for keadm-bin

Hack Club
Former maintainer at Hack Club

Skills

Software Development: TypeScript, Python, Node.js, Next.js, React, FastAPI, Flask, Express.js, Phoenix (Elixir), GraphQL, tRPC, Supabase, Firebase, Vue.js
DevOps & Infrastructure: Kubernetes, Helm, ArgoCD, Terraform, Ansible, Kustomize, Chef, Docker, Harbor, Traefik, Nginx, Envoy
Networking & Virtualization: Tailscale, WireGuard, Proxmox (KVM), Cilium, Istio, eBPF, Linux Traffic Control (tc), IPVS, VXLAN, NFV/SDN fundamentals
Cloud & CI/CD: AWS, SAM, S3, EC2, Lambda, Serverless Framework, Git, Jenkins
Observability & Security: Prometheus, Grafana, DefectDojo, OpenTelemetry
MLOps & Edge Computing: Kubeflow, KubeEdge, Kafka
